

To: Whom It May Concern

From: Andrew Dixon – Global Director of QEH&S

Maxcess maintains a compliance strategy intended to support compliance with applicable EU packaging requirements for packaging configurations that relevant Maxcess entities place on the European Union market.

The European Union's Packaging and Packaging Waste Regulation, Regulation (EU) 2025/40 (the "PPWR"), entered into force in February 2025 and generally applies from August 12, 2026, with longer lead times for certain requirements. Depending on the packaging type and intended use, the PPWR addresses matters such as substances in packaging, packaging minimization, recyclability, recycled content, reuse and refill, labeling, and conformity assessment.

Any EU Declaration of Conformity ("**DoC**") made available at the address below relates only to the specific packaging configuration expressly identified in that declaration. Each DoC is issued by, or under the responsibility of, the legal entity identified in the declaration and is supported by the technical documentation required under applicable law.

The materials on this page are provided for general information only and should not be relied on for packaging that is not expressly identified in the relevant DoC, packaging that has been materially modified or reconfigured, or packaging supplied under another entity's name or responsibility.

For supporting PPWR-related documentation, including Declarations of Conformity, please visit:
www.maxcessintl.com/compliance/ppwr/
